

Sinetiq Sandbox

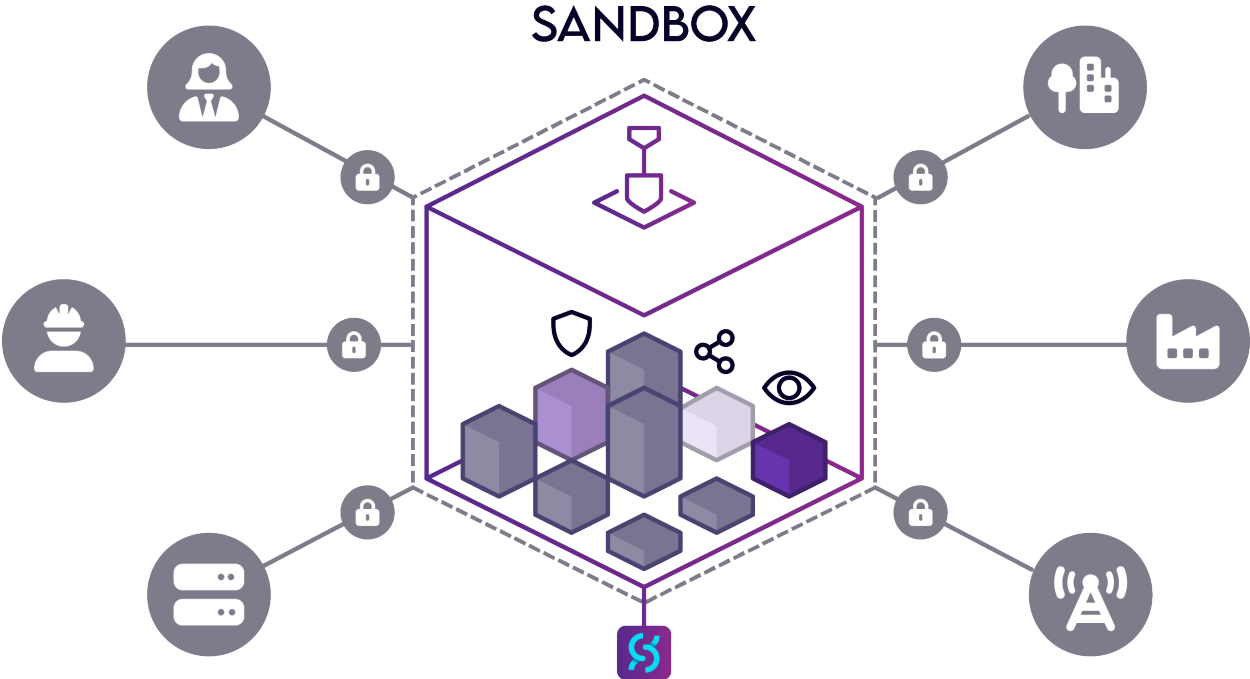

Test what we can't tell you

Sometimes words are not enough. Taking the step to a component based architecture can seem daunting at first, with intangible benefits and ways of working that feel different and unfamiliar. Technical hurdles with time demanding proof of concept exercises build hesitation.

Sinetiq Sandbox lets you dip your toes into the water without a big investment or commitment, while still providing the full experience and the possibility of real evaluation and familiarization with Sinetiq Framework.

The product consists of a virtual sandbox environment based on the full Sinetiq Framework, and gives you the possibility to test your own APIs and integrations without any risk of affecting your real ongoing operations.

Sinetiq Sandbox is provided as a cloud service instance, hosted by Sinetiq, to be used by a customer for evaluation, development, testing, training and more. The customer accesses the environment using a VPN that is either configured for each user or to an on-premise network at the customer's site.

Sinetiq Sandbox Content

SINETIQ SANDBOX BASE CONFIGURATION

- A private network in the cloud for the sandbox
- Sinetiq Core Software services deployed to the network and accessible via API and Web UI only from within the network
- All based on Sinetiq Framework and Sinetiq Strategic Integration Concepts
- 5 individual VPN users

OPTIONS

- Extra individual VPN users
- Connection to on premise network
- Virtual machine to deploy components to

NEXT STEP

Sinetiq Sandbox is a condensate of experience, competence and lessons learned working with integration within component based architecture for more than 20 years, now offered to the market as a product.
